

Network connectivity: Claims and discussion 2

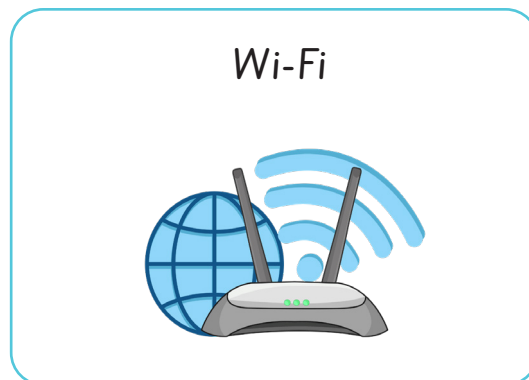

1. Mark an X next to the claims that are true under the picture.

It's easy to move from place to place while using mobile data.

Using mobile data is always free.

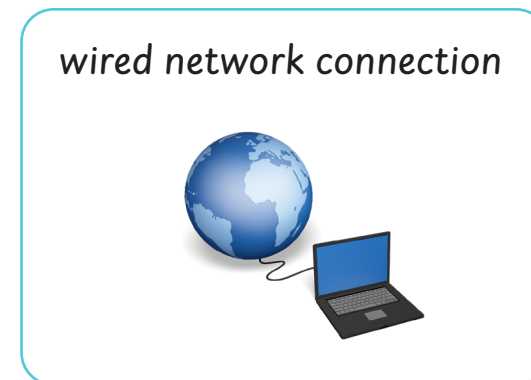

You use mobile data on your cell phone.

You can use a wireless network for many different household appliances and devices.

A wireless network needs a router to work.

A wireless network can get disconnected if a thick wall is blocking it.

A wired network connection is typically the fastest and most reliable connection.

It is difficult to move around whilst connected to a wired network.

You do not require a cable for a wired connection.

2. What would your day look like if you had no access to mobile data or Wi-Fi? What would be the best or the most difficult part of your day? Write about it, draw it or tell your classmate about it.

Student answer

Have a discussion and share thoughts on what the students would do if they were unable to make phone calls

and share ideas on how to pass the time if you didn't have access to the internet.
